for

City, Farm and Suburban Homes

**EMMONS & CO.**

Newark, New York State

---

**PRICE LIST**

**No. 25-G**

It is conceded that

**5 %**

of the building cost of a home  
invested in Nursery Stock for lawn  
and yard decoration, increases  
the property value at least

**20 %**

## FALL PLANTING

In most sections everything can be planted with perfect safety in the Fall and fine results obtained.

In extremely cold sections we recommend Spring planting for Perennials, Privet Hedging, Evergreens, Everblooming Roses, Peach Trees, Raspberries and Strawberries and recommend Fall planting of everything else. This refers to Maine, New Hampshire, Vermont, Northern New York, Northern Michigan and Northern Wisconsin.

We urge Fall orders because experience shows our customers are well pleased with results when they plant in the Fall.

## SPECIAL CUSTOMER BONUS on Orders of \$10.00 and over

There is a considerable saving in handling larger orders, which saving we are glad to pass along to our customers. Therefore, we will allow a bonus of 10% in Free Nursery Stock (customer's selection) on every order of \$10.00 or more ordered at prices quoted in this Price List.

## Caution To Salesman

Customer's Bonus of 10% additional Nursery Stock given FREE with orders of \$10.00 and over must be plainly marked on order blank, "Free Bonus Stock".

## IMPORTANT NOTICE

No advance payment is required on orders of \$2.00 or over.

Due to the cost of bookkeeping and handling small accounts, orders for less than \$2.00 must be sold for cash only, to be collected at the time the order is booked.

# **A COMMON-SENSE TALK ON QUALITY**

Remember Topsy, the little pickaninny of Uncle Tom's Cabin?  
Topsy "jest growed."

But Superior Quality Nursery Stock doesn't "jest grow."

No indeed! Superior Quality Nursery Stock is the result of ideal climate, good rich soil and exacting care combined with:

## **Five Points of Superiority That Result in Genuine Satisfaction to You**

**Pedigreed Parentage**

**Shield-Type Budding Protection**

**Scientific Root and Top Pruning**

**Nu-Way Spacing**

**Entire Root-Wrap Moisture Control**

Our now famous Five Point Program of Superiority is winning hosts of friends for us every season. That's the best proof of the Prize Winning Quality of stock produced as a result of these five scientific steps in propagation.

### **Pedigreed Parentage**

Why does one apple tree come into bearing a year or two earlier than another? PEDIGREED PARENTAGE! Why are apples on the good tree larger, heavier, juicier, of a fine, full bodied rich flavor and of excellent keeping qualities, while from the ordinary tree that "jest growed" the fruit is sparse and small and of a decidedly poor flavor? PEDIGREED PARENTAGE!

Why does a Blue Ribbon shrub or rose in the home owner's garden develop into a vigorous, hardy, full sized plant bearing a profusion of large, strong-stemmed, brilliantly colored blooms, while the ordinary bush is a comparative weakling? PEDIGREED PARENTAGE!

Pedigreed Parentage means selecting and discarding, picking and choosing, till exactly the right seedling stock is obtained and then the union (or marriage) with it of the finest and most appropriate type of budding stock.

That is Pedigreed Parentage!

### **Shield Type Budding Protection**

Scientific experiments have definitely shown that the methods of budding formerly employed, where this important operation was done in the cheapest way, resulted in nursery stock distinctly inferior to Pedigreed Stock.

To meet the exacting standards of Shield Type Budding Protection the cut which we make in the seedling (root stock) for the purpose of inserting the bud (variety stock), is a Shield Type incision.

The operation must be done at exactly the right time, when both the seedling and bud variety are in proper condition for growth. The bud must be of just the proper maturity to slide in the incision without forcing, which might injure the bud and weaken the plant.

SHIELD TYPE BUDDING PROTECTION is a most important factor in the production of Gold Medal nursery stock of genuine value.

## Scientific Root and Top Pruning

Scientific Root and Top Pruning replaces the ordinary haphazard methods, which so often result in inferior grades and disappointment to the home owner, with exact scientific methods that are sure to please.

Tests have demonstrated that ideal root and top pruning are absolutely essential to the production of Nursery Stock that is really superior in quality.

Leader Removal, that is the cutting out of part of the main branch or leader, is a type of pruning essential in the case of many varieties. It retards natural growth to obtain a heavy, well-branched, well-shaped tree or plant.

In other varieties, tests have demonstrated that heavy, bushy, shapely specimens are best obtained by Multiple Top Pruning, at predetermined intervals, throughout the growing period at the Nursery Farms.

Scientific Pruning develops an unusually heavy, compact root system, that permits transplanting with a minimum degree of shock and a consequent minimum interruption to natural growth.

That is why it is possible to offer our customers the protection of an exceptionally liberal replacement guarantee.—“IT GROWS OR WE REPLACE IT FREE.”

## Entire Root-Wrap Moisture Control

Superior Quality Nursery Stock, handled and packed by the New Moisture Control, Entire Root-Wrap Method, insures arrival at our customers' homes in the same field-fresh, ready-to-grow condition as when dug at the Nursery Farms.

Nursery Stock that is allowed to get too dry becomes permanently damaged and results in stunted, scrawny specimens, which never develop their natural beauty and productiveness.

If packed too wet, stock may become soft—premature growth may start and overheat in transit. When planted, unnatural growth may result in lack of root nourishment to keep pace with top development—and the plant withers and dies.

The new MOISTURE CONTROL ENTIRE ROOT-WRAP METHOD eliminates all these troubles. Each shipment—each individual piece of stock—receives *exactly the right amount of moisture* for delivery as Mother Nature intended, in ideal condition for successful planting. That means satisfied customers.

Spirea, Van Houtte, 12 to 18 in.....	21.00

# FLOWERING SHRUBS

## Hardy, Two Year

### Field Grown, Ready-To-Bloom

All our flowering shrubs have bloomed at the  
nursery farm the season before marketing  
For Fall or Spring Planting

The size mentioned after each variety is the height of Shrubs at time of shipment and the correct size for sure growth after planting. The size varies according to the habit of growth of the Shrub. The smaller sizes are dwarf growers and the others are medium and large growers. All sizes refer to height above roots.

Varieties marked \* are especially suited for Rock Gardens.

	Each	Three for
Althea, (Rose of Sharon), double blue, 2 to 3 ft.....	\$ .65	\$1.85
Althea, (Rose of Sharon), double white, 2 to 3 ft.....	.65	1.85
Althea, (Rose of Sharon), double pink, 2 to 3 ft.....	.65	1.85
Althea, (Rose of Sharon), double purple, 2 to 3 ft.....	.65	1.85
Althea, (Rose of Sharon), double red, 2 to 3 ft.....	.65	1.85
Althea, Tree Form, 3 to 4 ft., pink, red, purple, white..	1.15	3.25
The Altheas are especially desirable as they furnish a profusion of bloom late in the season when other blossoms are scarce. They will bloom freely even in very dry weather, yield readily to any kind of training and are admirable for hedges, screens or individual planting.		
Almond, double pink, red or white, 2 to 3 ft.....	.95	2.70
Barberry, Japanese Thunbergii, 2 to 3 ft.....	.65	1.85
Barberry, Japanese Thunbergii, 18 to 24 in.....	.45	1.30
Barberry, New Red Leaf, Eternal Flame, 15 to 18 in.	.79	2.25
Barberry, New Red Leaf, Eternal Flame, 18 to 24 in.	.95	2.70
Beauty Bush, pink, 18 to 24 in.....	1.65	4.60
Blue Leaf Honeysuckle, shell-pink, Blue-Green Leaves, 2 to 3 ft.....	1.95	5.60
Burning Bush, (Square Branches) 2 to 3 ft.....	1.45	4.15
Buddleia, Magnifica, violet blue.....	.69	1.95
Butterfly Bush, violet blue color.....	.69	1.95
Butterfly Bush, Ile de France, royal violet.....	.95	2.70
Calycanthus, (Carolina Allspice or Sweet Scented Shrub) chocolate brown blossoms, 2 to 3 ft.....	.95	2.70
Coralberry, (Is Indian Currant), delicate pink, 2 to 3 ft.....	.75	2.15
Cornus Siberica Alba, (Red Twig Dogwood), 2 to 3 ft	.95	2.70
Cornus Sanguinea, (Red Osier or Dogwood), white flower, 2 to 3 ft.....	.95	2.70
Cornus Stolonifera, (Red Ozier Cornel), white flowers, 2 to 3 ft.....	.95	2.70
Cornus Paniculata, (Gray Dogwood), white flower, 18 to 24 in.....	.95	2.70
Crab, Flowering (See page 18)		
Cranberry Bush, (Viburnum Opulus), white, 2 to 3 ft	.95	2.70
Deutzia Crenata, single white, 2 to 3 ft.....	.95	2.70
*Deutzia Graeilis, (Slender Deutzia), white, 12 to 18 in	.95	2.70
Deutzia Lemoine, white, 18 to 24 in.....	.95	2.70
Deutzia Pride of Rochester, white, 2 to 3 ft.....	.95	2.70
The best of the taller Deutzias. A general favorite and its popularity is well deserved.		
Dogwood, (Cornus Paniculata), gray, 18 to 24 in.....	.95	2.70
Elder Golden, white flowers, 2 to 3 ft.....	.95	2.70
Elderberry Improved, white, 2 to 3 ft.....	.95	2.70
Eternal Flame, New Red Leaf Barberry, 15 to 18 in.	.79	2.25
Eternal Flame, New Red Leaf Barberry, 18 to 24 in.	.95	2.70
Forsythia Fortunei, (Drooping Golden Bell), yellow, 2 to 3 ft.....	.95	2.70
Blossoms in the spring before the leaves appear. Very desirable and popular.		
Forsythia Viridissima, (Upright Golden Bell), yellow, 2 to 3 ft.....	.95	2.70
Forsythia Intermedia, yellow, 2 to 3 ft.....	.95	2.70

# FLOWERING SHRUBS

## Plant Blue Ribbon Shrubs For Quick Results

	Each	Three for
*Forsythia Spectabilis, golden, 2 to 3 ft. ....	.95	2.70
Fringe, purple, 2 to 3 ft. ....	2.45	6.95
Golden Bell, (Forsythia Fortunei), 2 to 3 ft. ....	.95	2.70
Golden Elder, (Golden Leaves), 2 to 3 ft. ....	.95	2.70
Golden Rose of China, (Hugonis), yellow, 18 to 24 in	1.25	3.65
Honeysuckle Blue Leaf, shell-pink, Blue-Green Leaves, 2 to 3 ft. ....	1.95	5.60
Honeysuckle Fragrant, bush, creamy white, 2 to 3 ft	.95	2.70
Honeysuckle Morrow's, white, 2 to 3 ft. ....	.95	2.70
Honeysuckle Tartarian, white, pink or red, 2 to 3 ft	.95	2.70
Hugonis, (Golden Rose of China), yellow, 2 to 3 ft. ....	1.25	3.65
Hydrangea Arboreseens, (Hills of Snow), white, 2 to 3 ft. ....	1.25	3.65
Hydrangea, P. G. Bush, pink, 2 to 3 ft. ....	1.25	3.65
Hydrangea Tree, mammoth pink flowering, 3 to 4 ft.	2.65	7.45
Hydrangea Hortensis, French, blue, 5 to 6 branches	2.45	6.95
Ile de France, (Butterfly Bush), royal deep violet. ....	.95	2.70

A gorgeous flowering shrub recently originated in France. Long, arched, lilac-like, violet-purple clusters bloom in great abundance in mid-summer at a time when scarcely anything is in bloom. The thickly flowered spikes are very showy in the garden and make delightful bouquets. Very fragrant. Vigorous, hardy grower.

Indian Currant, (Coralberry), 2 to 3 ft. ....	.75	2.15
Japan Quince, scarlet, 2 to 3 ft. ....	1.25	3.65

JAPAN QUINCE or Firebush. No shrub planting is complete without Japan Quince. Its gorgeous display of dazzling scarlet flowers in May cover the branches before the foliage appears.

Kerria Japonica, (Globe Flower), yellow, 18 to 24 in. .	1.45	4.15
Kerria White, (Jet Bead), black berries, 18 to 24 in. .	.95	2.70
Korean Spirea, white, 18 to 24 in. ....	.95	2.70
Lilac, Chas. Tenth, deep red, 2 to 3 ft. ....	1.95	5.60
Lilac, Madame Lemoine, white, double, 2 to 3 ft. ....	1.95	5.60
Lilac, Ludwig Spaeth, dark purple, 2 to 3 ft. ....	1.95	5.60
Lilac, Marie LeGraye, white, 2 to 3 ft. ....	1.95	5.60
Lilac, Michael Buchner, deep lilac, double, 2 to 3 ft. .	1.95	5.60
Lilac, Pres. Grevy, blue, double, 2 to 3 ft. ....	1.95	5.60
Lilac, Persian, 2 to 3 ft. ....	1.25	3.65
Lilac, pink or white, 2 to 3 ft. ....	1.25	3.65
Lilac, red, 2 to 3 ft. ....	1.45	4.15
Lilac, purple, 2 to 3 ft. ....	.95	2.70
Lilac, Villosa, pink-lilac, narrow panicles, 2 to 3 ft. .	1.25	3.65
Pearl Bush, (Exochorda), pure white, 2 to 3 ft. ....	1.25	3.65
Pepper Bush, white, 2 to 3 ft. ....	1.45	4.15
*Privet, Regal, blue berries, 2 to 3 ft. ....	1.65	4.70
Purple Fringe, 2 to 3 ft. ....	2.45	6.95
Pussy Willow, French, 2 to 3 ft. ....	.95	2.70
Rose of Sharon, (See Althea), 2 to 3 ft. ....	.65	1.85
*Snowball, Common, white, 2 to 3 ft. ....	1.25	3.65
Snowball, Dentatum, (Arrowwood), 2 to 3 ft. ....	1.25	3.65
Snowball, Japan, white, 2 to 3 ft. ....	1.45	4.15
Snowberry, white berries, 2 to 3 ft. ....	.85	2.45

The Snowberry is a shrub of great value—for its fine foliage—slender gracefully bending branches—dainty pink blossoms in June and July. It will thrive in dry barren soil—it will grow in shade so dense that almost nothing else will grow. Large white berries in Fall are very decorative.

**There Is A Shrub Bargain Group  
To Meet Your Needs, See Page 30**

# FLOWERING SHRUBS

(Continued)

**We Offer Only Well Branched,  
Heavy Rooted, Landscape Size Shrubs**

	Each	Three for
Spirea, Anthony Waterer, crimson, 15 to 18 in. ....	.85	2.45
Spirea, Aurea, (Golden), 2 to 3 ft. ....	.95	2.70
Spirea, Astilbe, (A Perennial).....	.95	2.70
Spirea, Billardi, pink, 2 to 3 ft. ....	.95	2.70
Spirea, (New Korean), 18 to 24 in. ....	.95	2.70
Spirea, Bumalda, light pink, 18 to 24 in. ....	.95	2.70
*Spirea, Callosa Alba, white, 12 to 18 in. ....	.95	2.70
Spirea, Douglassi, pink, 2 to 3 ft. ....	.95	2.70
*Spirea, Froebelia, pink, 12 to 18 in. ....	.95	2.70
Spirea, Golden, (Aurea), 2 to 3 ft. ....	.95	2.70
Spirea, Prunifolia, (Bridal Wreath) white, 2 to 3 ft. ....	.95	2.70
*Spirea, Thunbergii, white, 18 to 24 in. ....	.95	2.70
Spirea, Van Houtte, white, 2 to 3 ft. ....	.49	1.40
Spirea, Van Houtte, white, 3 to 4 ft. ....	.59	1.70

The most popular of all the Spireas, especially valued because of its hardiness and the rapidity of its growth. Produces white flowers in clusters during May and June. Foliage dense deep green.

Syringa, Coronarius, (Mock Orange), white, 2 to 3 ft. ....	.95	2.70
Syringa, Golden, 18 to 24 in. ....	.95	2.70
Syringa, Gordonianus, white, 2 to 3 ft. ....	.95	2.70
Syringa, Grandiflora, fragrant, white, 2 to 3 ft. ....	.95	2.70
Syringa, Lemoine, very sweet scented, white, 2 to 3 ft. ....	.95	2.70
Syringa, Virginalis, white, 2 to 3 ft. ....	1.25	3.65

Because of its rare beauty, its unusually long blooming period beginning in May, its large white individual flowers, which measure two inches or more in diameter, Syringa Virginalis should be in every planting.

*Tamarix, (Tamarisk), pink, 2 to 3 ft. ....	1.25	3.65
*Viburnum, (Snowball), white, 2 to 3 ft. ....	1.25	3.65

## Always Plant Blue Ribbon Thorobred Roses

Gold Medal Roses are all strong, vigorous, field-grown bushes. Not spindly, green-house or southern-grown weaklings.

Here's the reason—for propagating pedigreed Roses, the type of root stock selected is particularly selected for the variety to be grown.

Only certain types of strong growing, disease resisting, hardy root stocks are used. Some of these root stocks are imported from Holland and France. Others are grown in certain sections of the United States.

After the hardy root stock has grown for one year or inore, the desired variety is then budded, by the Shield Type Protection Budding Process.

The budded stock is then allowed to grow for two years, into a strong, vigorous bush, full of vitality and ready-to-bloom in your garden.

Gold Medal Roses are produced from Pedigreed Parents and budded on hardy, strong growing root stock. Therefore, you can readily see why Blue Ribbon Roses should be planted on your home grounds. Don't be fooled, by cheap inferior rose bushes—plant the famous GOLD MEDAL, PRIZE-WINNING ROSES and enjoy magnificent, lovely, fragrant Roses in your garden.

## A COMMON SENSE TALK ON QUALITY

(Continued From Page 3)

### Nu-Way Spacing

Have you ever noticed when driving past a piece of woods, what appeared to be a nice, shapely Evergreen or Shade Tree?

It takes your eye. You get out, walk back in the woods to examine it, but to your disappointment, find it's a fine shapely tree on one side only—and on the other side, ill-shaped, unbranched and unsightly.

What's the cause?

The shapely side enjoyed plenty of room to develop. It received its share of sunlight. The other side was crowded in a density of other growth. Crowding and lack of sunlight are sure to result in unsightly, ill-shaped trees and plants.

With NU-WAY SPACING, trees and plants have plenty of room for cross cultivation, both in the rows and between the rows. They enjoy plenty of sunlight. There is sufficient space for perfect development.

This Nu-Way Spacing method of propagation requires nearly double the acreage to grow the same quantity as compared with the Crowding plan used for growing "cheap stock."

Nu-Way Spacing produces round, bushy, shapely trees and plants of "Blue Ribbon" Quality—trees and plants that fulfill every expectation of our customers.

## Quinces:

10 x 10 ft.— 435 Trees  
12 x 12 ft.— 302 Trees  
15 x 15 ft.— 193 Trees

## Raspberries (red):

2 x 7 ft.—3111 Bushes  
3 x 7 ft.—2074 Bushes

## Raspberries (black):

3 x 7 ft.—2074 Bushes

## Strawberries:

1 x 4 ft.—10,890 Plants

To estimate the number of plants required for an acre at any given distance, multiply the distance between the rows by the distance between the plants, which will give the number of square feet allotted to each plant, and divide the number of square feet in an acre (43,560) by this number. The quotient will be the number of plants required.

## AGE AT WHICH DIFFERENT TREES USUALLY FRUIT

XXX Size Only

This varies greatly with different varieties. Such apples as "Yellow Transparent" and "Duchess of Oldenburg" often fruit the second year, while "Northern Spy" seldom fruit in less than ten years after transplanting, though it is one of the best apples and a prolific yielder when of bearing age. The average time after planting is, for

Apples.....2 to 6 yrs.  
Blackberries.....1 to 2 "  
Cherries.....3 to 4 "  
Crab Apples.....2 to 6 "  
Currants.....1 to 2 "  
Dwarf Pears.....2 "  
Gooseberries.....1 to 2 "  
Grapes.....2 "

Plums.....2 to 4 yrs.  
Peaches.....2 to 3 "  
Quinces.....3 to 4 "  
Raspberries.....1 to 2 "  
Std. Pears.....3 to 4 "

Roses usually bloom the first year

# FRUIT GROWERS MUST HAVE **NEW** ORCHARDS COMING ON TO ASSURE BIG STEADY PROFITS !

National authorities emphasize profit importance of having Younger Orchards.

Dr. John R. Magness of the United States Department of Agriculture, a leading fruit authority, urges Farmers to start planting New Orchards now to replace unproductive old trees and unprofitable varieties. Here are some of the recommendations made by Dr. Magness quoted in the Illinois Horticultural Society Bulletin for March 1938.

"High quality fruit is produced in young orchards. It's expensive to produce fruit on old trees".

"Choose New Plantings of best quality and variety—suitable for both eating and cooking purposes".

"Don't let orchards grow too old. If apple trees are over thirty years old and the grower wants to stay in the apple business, it is time for him to start replanting in order that there might be some young trees coming along".

## INCREASE FARM PROFITS

Young trees planted on hill sides or rolling land will help hold the soil and prevent erosion. Roadside planting of Fruits pay all or part of Farmers Taxes; thus Farmers can make handsome profits by converting such land into profitable orchards.

### BIG FARMER AND FRUIT GROWER DEMAND FOR TREES !

During the past twenty-five years there has been a constant decrease in the number of bearing and newly planted Fruit Trees in the United States. In addition to this shortage, many of these trees are old—and will soon be past the age of profitable production. Young Orchards are needed badly—The decrease in the number of young orchard trees is really alarming.

Dr. H. P. Gould of the United States Department of Agriculture reports:

65.8 million apple trees in 1910.

17.5 million apple trees in 1935.

There are now 48.3 million fewer apple trees than twenty-five years ago.

And Dr. Gould reports that in 1910 there were only ninety-two million people in this country, whereas in 1936 the population was one hundred thirty million. This means an increase in population of forty per cent and during the same period the number of apple trees decreased 45%. The demand for fruit has increased 40 percent in twenty-six years and trees planted to supply the demand has dropped 45% during this time.

## HOW DOES THIS EFFECT MR. FARMER

The Fruit trees that have been working overtime to supply the increased demand for fruits have passed their peak of production and not enough young trees have been planted to supply the demand. As a result a shortage of quality fruit will develop. A shortage of Fruit means high prices, big profits and a mighty fine return on money invested in fruit trees this year.

### YOU HAVE A DUTY TO PERFORM!

Farmers are busy—don't have much time to read and may not learn about the above situation until it is too late. History shows that Farmers everywhere always plant Farm Crops when they are selling at high prices. Markets are then flooded, prices go down and everyone loses money. The time to plant Fruit Trees is when Fruit prices are below average and people are not over-planting. Then when trees come into bearing the demand for Fruit will be greater than the supply and will bring sky-high market prices.

With the population of the United States increasing every day and the number of bearing trees getting less and less, it is your duty to persuade the Farmers in your section to plant their full quota of Fruit Trees this year. Tell them what has happened during the past twenty-six years—also that the right time to plant Trees is now, when Fruit is selling at below average prices. Then when the trees reach a bearing age the Fruit they produce will bring high market prices—Do that and you will help Farmers in your locality enjoy greater prosperity than they have ever known before. Many an acre of unprofitable Farm land has been turned into a money-making investment by planting our trees.

We make no charge for packing or boxing and will include extra items to offset transportation charges. Town where customer's nearest freight station is located must be given on order blank.

# Good Trees Are Great Money Makers

By SAMUEL FRAZER

---

(From The American Agriculturist)

---

Think of the time and energy which the planter and his children will waste growing a scrub tree when they might be reaping dollars by caring for a good one! We never get something for nothing. It costs more to grow a tree right than to grow a scrub.

The public can get what it pays for and no more. The fruit grower who wants a tree well-grown on first-class roots, propagated with care, will have to pay enough to reimburse for the additional expense in propagating.

## GOOD TREES COST MORE—WORTH MORE

It is believed that French stocks are best for apples, because the roots are cleaner from aphis, crown gall, hairy root and other diseases, now recognized as dangerous to introduce into an orchard. These also thrive better.

American grown seedlings in recent years may be purchased at one-third the price of the highest grade French grown seedlings. Naturally the man who is growing cheap trees would purchase straight-rooted American grown seedlings.

## FRENCH SEEDLINGS

Northern nurserymen purchase French grown seedlings, grow them until August and then bud and grow their trees for three seasons to secure a satisfactory size. The trees grow slowly, but the slow grown trees weigh more than a fast grown tree of equal size.

## PEDIGREED TREES PAY BIG

There are apple orchards which are averaging 10 barrels a tree. These orchards for a term of years will run in a gross revenue from \$20, to as high as \$40 a tree; in other words, one single apple tree will turn in as much money as an acre of beans or wheat or as much revenue as the average cow and have to feed her three times a day and milk her twice

The same farmer who is going to buy an apple tree, when he contemplates purchasing a horse will always prefer and pay more for a well-bred, well put up, close-coupled work horse, because he can do more work. If he is well-bred he is worth more than a scrub.

He will pay more for a cow capable of producing 10,000 pounds of milk than for one whose maximum is 4,000. Why not use the same judgment in buying trees?
